SAMU - Rwanda Biomedical Centre

SAMU Roster

User manual

For the Drivers Manager

About this manual

This manual explains what the Drivers Manager does in SAMU Roster: keeping the fleet list, building the driver part of the roster, reviewing it and handling driver changes.

In this manual

1. Your role
2. Signing in and getting around
3. Ambulances
4. Generating the driver roster
5. How a roster moves from draft to published
6. Reviewing your part
7. Reading the roster board
8. If something goes wrong

Version 1 - 24 October 2026 - This manual covers only what this role does.

Your role

As **Drivers Manager** you build and look after the **driver** part of the roster. Medical crew and the dispatch desk are never touched by what you do.

You can	You cannot
Generate and regenerate the driver part of a roster	Generate medical crew or the dispatch desk
Add and edit ambulances	Add or edit employees, stations or leave
Check conflicts and submit a roster for review	Publish a roster (administrator)
Replace a driver; accept a crew running with no driver	Replace medical crew members
Plan driver coverage for events; review command decisions	Create events

Your menu

Dashboard, Ambulances, Generate Roster, Roster Board, Crew Rollup, Events, Notifications and Command Decisions.

Signing in and getting around

1. Open **https://ems-rw.duckdns.org** in a browser on a computer or phone.
2. Type your **username** and **password** exactly as given to you. The username is case sensitive and can contain a space.
3. Press **Sign in**.

> **IMPORTANT** After **5 wrong passwords** for the same username, sign-in is blocked for 15 minutes. You stay signed in for 12 hours, then you sign in again. There is no way to change your own password in the app: ask the administrator to set a new one.

On a phone

- Tap the **menu button** (three lines, top right). Groups with an arrow open when you tap them; tap a page and the menu closes.
- Lists appear as cards, one per person or record, with their buttons underneath. The roster grid scrolls sideways: swipe it.

Signing out and this manual

Log out and **User manual** are at the bottom of the menu, below your name. The manual you open is always the one for your role.

Ambulances

Ambulances lists the fleet. Add or edit a vehicle with **Plate no.**, **Type**, **Station** and **Status** (active, maintenance, out of service). Only active ambulances get drivers. Keep the status current: a driver placed on an ambulance that goes out of service is flagged by Check conflicts.

Generating the driver roster

1. Open **Generate Roster**. The page says *Generates drivers only - medical crew and dispatch aren't touched.*
2. Read the **Preflight check**. Choose the **Range** (Day, Week, Month or Custom range) and the **Reference date**, then press **Generate roster**.
3. Wait. The page shows elapsed time; it can take several minutes. You can keep it open or return later.
4. The result lists any ambulance shift that could not get its drivers. Those gaps also appear when you check conflicts.

- If a roster already exists for exactly those dates, your drivers are added to it. **Regenerate** on the Roster Board recomputes only the drivers.
- The system aims for each driver to work within one shift of the others in the same week, and balances hours over the whole month. A day shift counts as 10 hours and a night shift as 14.
- Each ambulance needs the minimum number of drivers set on its station for every shift it runs.

How a roster moves from draft to published

Stage	What it means	Who acts
Draft	Being built. The three parts (drivers, medical crew, dispatch desk) can each be generated into the same draft.	You, the other managers and the administrator
Submitted	Sent for review. It is locked: nobody can generate into it.	Anyone signed in (you can submit when your part is done)
Published	Final. Every person in it is notified. Later changes go through crew replacements, which notify the people affected.	Administrator only

Check conflicts on the Roster Board lists anything that would block publishing: a missing rest day, a person scheduled while inactive, a night shift for someone not cleared for nights, a leave day that was overridden, a crew with no Pro, or an ambulance that is not in service. Each line says how to fix it.

Reviewing your part

1. Open **Roster Board** and choose the roster. You see only drivers.
2. Press **Check conflicts**. Lines under **Can't publish** must be fixed or formally accepted.
3. When your part is ready, press **Submit for review**. The administrator then publishes.

Replacing someone or accepting a gap: Handle shortage

1. Open **Crew Operations > Crew Rollup**, choose the roster and the day, then pick the station. Each ambulance shift is a card.
2. Press **Handle shortage** on the ambulance shift (it is next to the driver). A window opens: **Choose how to fill this seat**.
3. Under **Legal picks**, choose a person. Candidates are ranked by fairness, least-loaded first. **Home station only** and **Show ineligible too** filter the list. Press **Confirm crew replacement**. Both people are notified if the roster is already published.
4. If nobody is legal, **Risky picks - needs an override** lists people who would break a protected rule (for example a rest day or Pro coverage). Choose a reason, write a justification and type **OVERRIDE** to confirm.
5. If nobody can be found, under **Or: leave this crew short** press **Approve this crew to run with no driver**. Choose a reason and write a justification. Nobody is moved; the gap is accepted and logged.

> **IMPORTANT** Every risky pick and every accepted shortage is recorded under **Command Decisions** with your name, the reason and the justification. Safety-related ones are reviewed by the administrator.

Planning event coverage

1. Open **Events** and find the event. If no generated roster covers the event date, you are told to plan a roster for that week first.
2. Press **Plan coverage** and choose **Roster to plan against**. The system computes a **Coverage plan**: ambulances, drivers, and any gaps (*Gaps remain* or *Fully covered*).
3. If the plan would disrupt existing coverage (pulling an ambulance, reassigning someone from a shift or from mandated rest) it is marked **Risky**. Press **Continue - needs a reason**, choose a reason, write a justification, then **Confirm & commit**.
4. A plan with no disruption is committed with **Commit this plan**.

Command decisions and notices

- **Pull for event** (the calendar-style button next to a driver in Crew Rollup) takes a driver off a crew for an event and leaves the crew short.
- **Command Decisions** shows every approved rule break in your area, with who approved it and why. Use **Mark resolved** when it is closed.
- **Notifications** shows messages for you. Press **Mark read**.

Reading the roster board

The board has one row per person and one column per day. Each cell holds a code. Colours: blue-tinted cells are day shifts, dark cells are night shifts, grey cells are days off, amber cells are leave or other absence, green cells are event duty.

Code	Meaning
D + number (D3)	Day shift at the station with that code
N + number (N3)	Night shift at the station with that code
DR / NR	Day / night shift at the Regulation desk (call centre desk)
DE / NE	Day / night event duty
O	Off
AL, SL, ML, PL	Annual leave, sick leave, maternity leave, paternity leave
TR, AD, P	Training, administration, permission
MS, ST, CY, CL	Mission, stock, cyclism, circumstance leave
DT, DM, DC, R	Data, day meeting, day checking, roster
SB	Standby

For fairness, a day shift counts as **10 hours** and a night shift as **14 hours**. The total on the right of each row is hours worked in the roster.

Rules the system applies when it builds a roster

- One shift per person per day. Leave is respected exactly as entered.
- The day after a night shift is a day off. A day shift is never placed directly before a night shift.
- No more than **2 working days in a row**. Rest and run-length rules also continue across the border between two rosters.
- People marked as unable to work nights never get night shifts.
- Anesthesiologists and critical-care staff work only at the four middle-site stations and are the only people the Regulation desk draws from the medical team.
- Every crew should have at least one Pro. If people are short, the system fills what it can and reports the gap; it never refuses to build a roster.
- Hours are balanced fairly across the whole calendar month, not only inside one roster.

If something goes wrong

What you see	What to do
Sign-in is refused	Check the username (capital letters, spaces) and password. After 5 wrong tries, wait 15 minutes.
'Session expired - please log in again'	You were signed in for more than 12 hours. Sign in again.
'Waiting for another generation to finish'	Only one roster is built at a time. Keep the page open or come back later.
Generation seems to take very long	A full roster takes about 10 to 15 minutes. If the page was closed or the system restarted, start it again.
'This date range partially overlaps an existing roster'	Choose the exact dates of the existing draft to add to it, or dates that do not touch it.
'Can't be regenerated (status submitted/published)'	The roster is locked. Ask the administrator to reopen a submitted one.
A shift shows no driver	Replace a driver in Crew Rollup, or approve the shift to run with no driver.
Anything else	Tell the administrator the screen name, what you pressed and the exact message.
